

## Quiz 1

In your sketches, label all intersection points with the  $x$ - and  $y$ -axes.

1. Sketch the parametrized curve by first eliminating the parameter:

$$x = 5 \cos t, y = 5 \sin t, 0 \leq t \leq 2\pi$$

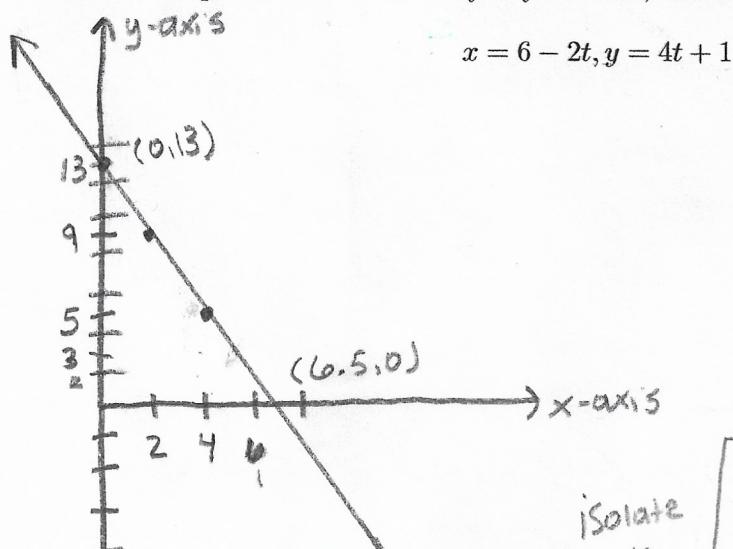

$$\frac{x^2}{5^2} + \frac{y^2}{5^2} = 1$$

CIRCLE @ origin

$t$	$x = 5 \cos t$	$y = 5 \sin t$
0	5	0
$\frac{\pi}{2}$	0	5
$\pi$	-5	0
$\frac{3\pi}{2}$	0	-5

$$\begin{aligned} x &= 5 \cos t & y &= 5 \sin t \\ \frac{x}{5} &= \cos t & \frac{y}{5} &= \sin t \\ \left(\frac{x}{5}\right)^2 &= \cos^2 t & \left(\frac{y}{5}\right)^2 &= \sin^2 t \\ \sin^2 t + \cos^2 t &= 1 & \text{equation used} \end{aligned}$$

2. Sketch the parametrized curve by any method, but show your work:

$$x = 6 - 2t, y = 4t + 1$$

$t$	$x = 6 - 2t$	$y = 4t + 1$
1	4	5
2	2	9
3	0	13

$$\begin{aligned} X &= 6 - 2t & y &= 4t + 1 \\ X - 6 &= -2t & y &= 4\left(\frac{1}{-2}(X-6)\right) + 1 \\ \frac{X-6}{-2} &= t & y &= 4\left(\frac{X}{-2} + \frac{6}{2}\right) + 1 \end{aligned}$$

eliminate  $t$

Line with -2 slope

$$\begin{cases} y = -2x + 26 \\ y = -2x + 13 \end{cases}$$

$$y = \frac{4x}{2} + \frac{24}{2} + 1$$

$$y = -2x + \frac{24}{2} + \frac{2}{2}$$
